

PRESS RELEASE

CARMAT is participating in the 27th EACTS Annual Meeting in Vienna (Austria)

Paris, September 30, 2013

CARMAT (FR0010907956, ALCAR), the designer and developer of the world's most advanced total artificial heart project, providing an alternative for people suffering from terminal heart failure, announces its participation in the 27th annual meeting of the European Association for Cardio-Thoracic Surgery ([EACTS](#)), which will be held in Vienna, Austria, from October 5 to 9, 2013, in order to share its project with professionals from the sector.

Marcello Convitì, Chief Executive Officer of CARMAT, says: *"Following the approval received from the French health authority (ANSM) at the end of September to carry out a clinical study on four patients in France, this EACTS annual meeting represents a timely opportunity to have practical discussions with the international cardiac surgery community regarding the clinical aspects of our bioprosthetic artificial heart project. Our interactions with experts in this field will be very useful for the development of the following stages of our clinical validation, notably abroad."*

About CARMAT: the world's most advanced total artificial heart project.

The only credible response for all cases of end-stage heart failure, which is a real public health issue: CARMAT's aim is to be able to provide a response to a major public health issue associated with heart disease, the world's leading cause of death: chronic and acute heart failure. Indeed, this disease currently affects over 100 million patients in developed countries. By pursuing the development of its total artificial heart, CARMAT intends to overcome the well-known shortfall in heart transplants for the tens of thousands of people suffering from heart failure.

The result of combining two types of unique expertise: the medical expertise of Professor Carpentier, known throughout the world for inventing Carpentier-Edwards® heart valves, which are the most used in the world, and the technological expertise of EADS, world aerospace leader.

Imitating the natural heart: given its size, the choice of structural materials and its innovative physiological functions, CARMAT's total artificial heart could, assuming upcoming clinical trials are successful, potentially benefit the lives of tens of thousands of patients a year whilst ensuring there is no risk of rejection and providing them with an unparalleled quality of life.

A project leader acknowledged at a European level: with the backing of the European Commission, CARMAT has been granted the largest subsidy ever given to an SME by Bpifrance; a total of €33 million.

Strongly committed, prestigious founders and shareholders: [Truffle Capital](#), a leading European venture capital firm, [EADS](#), the [Fondation Alain Carpentier](#), the [Centre Chirurgical Marie Lannelongue](#), and the thousands of institutional and individual shareholders who have placed their trust in CARMAT.
